

Early Years Talk-Talk

Friday 15th March 2019

STAR OF THE WEEK

for using super scientific vocabulary during our experiments

Message from Early Years

What super scientists we have been this week!

We have had so much fun discovering lots of new things. We have learnt about how plants grow, the lifecycle of a frog, different transport, space, how to make gloop and learning all about the life cycle of a human.

We have carried out different investigations such as the dancing raisins using fizzy water, the skittles investigation using warm water, will the wind blow it? the dinosaur experiment and the celery experiment where we observed what happened to the celery when we put food colouring into the water. The children had lots of fun predicting what they thought would happen for each experiment.
